| PAIR | |

# Notification Service

To get access to slave DB,

- Go to odin.myntra.com  Access  DB Access  Schema is **myntra_notification**
- In any SQL UI Client, enter host as  myntra_notification-userslave1.mynt.myntra.com and your ODIN DB username and password.
- Choose, **myntra_notification** DB to view all tables.

### Status of Published SMS

- Sometimes even when the status of SMS request is **PUBLISHED_TO_PROVIDER** in DB, it does not mean that it has been sent to the user.
- In order to confirm this, an email with relevant details like,
  - Mobile Number
  - Message Reference Id
  - Timestamp the request was pushed to provider
  needs to be sent to SMS service provider. These info can be obtained from **myntra_notification.sms_details_VIEW** table.
- Gupshup support email  enterprise-support@smsgupshup.com
- ValueFirst support email  support@vfirst.com
- Karix
  - Instrumentation is enabled. Get the id of SMS request from **myntra_notification.sms_details_VIEW** table.
  - Query ***tracking_details_v2*** using id from sms details as **entity_id.**
  - **Sample query**  *select * from `tracking_details_v2` where entity_id in (2991124170);*
  - If eventType column is DELIVERY or CLICK, it means message was delivered to user.
  - If no rows are returned, it means instrumentation callback is not received for that request yet. In such cases we can email tech-support@karix.com with above mentioned details.

Please go through the below walkthrough video explaining the above steps,

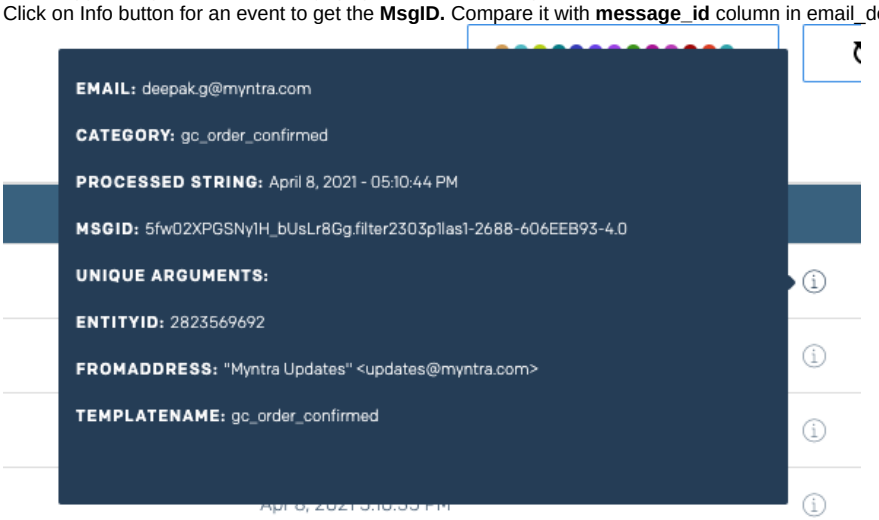
### Status of Specific Email Request

- To know the status of emails triggered to Notification service, pick the **id** of particular request from **myntra_notification DB *email_details_VIEW*** table.
- Query ***tracking_details_v2*** using id from email details as **entity_id.**
- **Sample query**  *select * from `tracking_details_v2` where entity_id in (2991124170);*
- There might be delay in getting the instrumentation event from SendGrid as well, in those cases we can check directly from SendGrid portal

```
Url : app.sendgrid.com
Username: engg_erp_crm
Password: Mynt@sg123
```

  Since 2FA is enabled, ping (sujan.badrinarayan@myntra.com or deepak.g@myntra.com) to get the code and log in.

- Once logged in, go to "Email Activity" page and search using email address. All events for that email will be displayed.
- Click on Info button for an event to get the **MsgID.** Compare it with **message_id** column in email_details table.



# Thanos (Ticketing Management System)

## Wrong QueueName getting Stamped

We are observing cases where instead of ML Queue 3 PL is getting stamped and in some cases instead of 3PM queue ML is getting stamped

**Steps to debug the issue**

1.First get the Task categoryName

2.Check in **task_categories_detail** table what are the conditions configured in columns of status_details,department_details,queue_details

Example :

```
[
  {
   "selectorExpression": {
     "==": [
       "returnCourierCode",
       "ML"
     ]
   },
   "values": [
     "DC"
   ]
  }
]
```

This is sample config from department_details column.Here **returnCourierCode** condition is getting checked. Now check in payload of that particular task if **returnCourierCode** field is coming in request.Most of the times this field will be missing.Based on that ask the client to pass that field

## DC Code not captured in Tasks

- Login to Pac-thanos3 machine
- navigate to  /myntra/thanos/service/releases/current/thanos-tomcat/webapps/myntra-thanos-service/WEB-INF/classes/crons/workFlows
- Execute the python command :  python SynergyAutoPopulateLmsDetails.py -r ml_dc_missing -t 2297 -a THANOS -c myntra > mldc_missing.txt
- check for any mentioned TaskId if **deliverycenterName** is populated.You can check this from SA
- If not populated then open the file name SynergyAutoPopulateLmsDetails.py and manually paste the TaskId.comment this line #taskIds = df['Task ID'].tolist() and uncomment below line and paste the task Id
  taskIds =  ["IN240129215226295368 61ITP1bkkI"]
- Now execute the same python command mentioned above.
- Once it is executed check in the file **mldc_missing.txt** for logs to understand if any issue.

## Create Incident issue across SA Pages

### Create Incident not getting submitted / throwing error(via Create Incident button using level1,2 and 3)

- Check if it is happening for 1 agent or across the floor.
- Check if exact error screenshot shared.If not request for screenshot
- Understand at what level issue is occurring.Is it item/packet/order/return or for all?
- Ask them for execution steps
- Raise it to crmoncall@myntra.com

### Create incident failing from Quick button

- Check if it is happening for 1 agent or across the floor.
- Check if Quick button name is shared
- Understand at what level issue is occurring.Is it item/packet/order/return or for all?
- Check if exact error screenshot shared.If not request for screenshot
- Ask them for execution steps
- Raise it to crmoncall@myntra.com

## Incident or task notes not getting updated

- Check if the issue  is happening for 1 agent or across the floor.
- Check if exact error screenshot shared.If not request for screenshot
- Check if incident Id is shared.If not request for incident id
- Raise it to crmoncall@myntra.com

## Email Allocation Issue

Auto Assign Is Not Working For Escalation Desk, Email team

- Raise it to cs-hercules-oncall@flipkart.com

### Incidents and Tasks are not getting assigned

- Raise it to cs-hercules-oncall@flipkart.com

### Incident or task complete information is missing

- Check if  Incident ID or task ID is shared
- Check what exact info missing in the incident or task
- Raise it to crmoncall@myntra.com

### Duplicate task creation issue

- Due to diff-2 idempotency layer for incident creation, it's possible for duplication incident & task creation for same entity
- Raise it to crmoncall@myntra.com

### Old refund details required

- Need to check if PPS Id is shared
- Need to login into myntra_crm db and access imps_log table.
- search with pps_id from the column idempotrntId and get URN from urnno column
- Login into RNarchive DB and search for data in Co$IMPS_SP table with urnno(myntra_urn) column
- check if imps_RRN,myntra_status and myntra_Action data is there.share these details in ticket.
- If still not clear raise it to crmoncall@myntra.com

## Surveyor

## Tasky

### Download / Upload stuck

#### Download

- Issue with downloads will be because of MWS mostly, which will be followed up with the team with relevant **jobId**. (#mws-prod-issue Slack channel)
- Downloading one file at a time is only possible, so when a job is stuck, re-downloads can't be triggered.
- To overcome this, config is maintained which can be changed to allow re-downloads after "x" minutes.

#### Upload

- Uploads can be triggered again when it is stuck.

### Report not downloadable : No Data error

- This occurs due to the user not having permission to download the report.
- Issue can be raised with ServiceDesk team, asking them to copy permissions of the user who is able to download the file to the one facing the issue.
- CRM team can also help in sharing the exact permissions required for the report if it's needed.

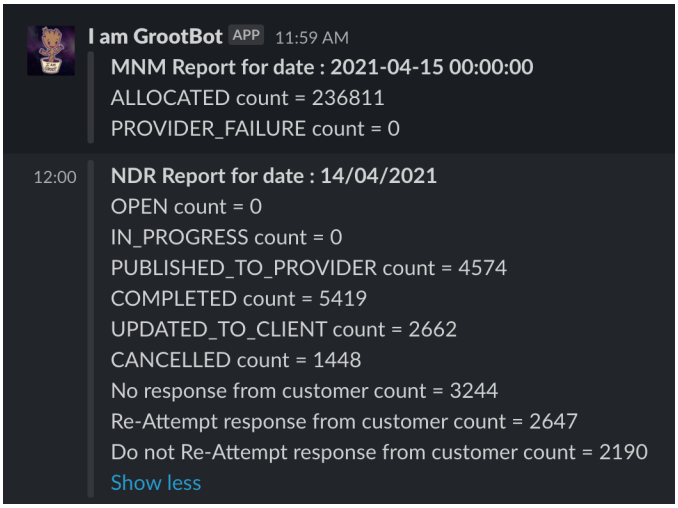
### Required Data not present in report

- Check if the data is configured in **report_additional_info** table **field_map** column of **myntra_thanos** DB. If not, add necessary data in the config.
- If config is present, enrichment is not happening from Thanos, which needs to be checked with product / debugged further.

## Groot

### Campaigns stuck in PUBLISHED_TO_PROVIDER status in groot daily reports

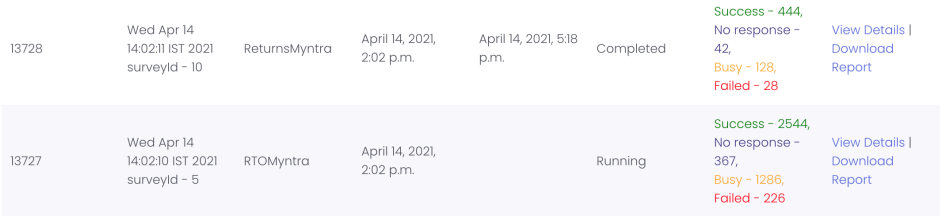
- Subscribe to channel
  https://join.slack.com/share/zt-qtw8l9va-DLVRsU4GJ7XLKZ0ZOCFoTw
  In the daily NDR report if campaigns are stuck in PUBLISHED_TO_PROVIDER status like below example.



- Login to https://myntra.askerbot.com/mgr/home/ (Raise request with crm team to create credentials)
- Curl to fetch campaign details

```
curl -X GET \
  'https://myntra.askerbot.com/api/campaigns/list?end_date=13-10-2021&start_date=12-10-
2021&per_page=100&survey=%5B11,%2035,%2036,%205,%2028,%209,%2010%5D' \
  -H 'Authorization: JWT eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.
eyJ1c2VybmFtZSI6ImFwaS11c2VyQG15bnRyYS5jb20iLCJvcmlnX2lhdCI6MTYzNDIxMDg3NiwidXNlcl9pZCI6NDg3LCJlbWFpbCI6I
mFwaS11c2VyQG15bnRyYS5jb20iLCJleHAiOjE2NTAwMjIwNzZ9.-e542kTnxSMboHQyFxMQ0JpKA76bc7xC5FSPrp8Y_4g' \
  -H 'Content-Type: application/json; version=1.0' \
  -H 'Postman-Token: 52fe166d-fe2d-4eb5-8936-de2779764cb4' \
  -H 'cache-control: no-cache'
```

- Click on campaigns tab https://myntra.askerbot.com/mgr/campaigns/
- Set page size to 100 below for better scrolling and search
- All campaigns for other than current day should be in **Completed** status,
  Here campaign 13727 is in **Running** status.



| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 13728 | Wed Apr 14 14:02:11 IST 2021 surveyId - 10 | ReturnsMyntra | April 14, 2021, 2:02 p.m. | April 14, 2021, 5:18 p.m. | Completed | Success - 444, No response - 42, Busy - 128, Failed - 28 | View Details \| Download Report |
| 13727 | Wed Apr 14 14:02:10 IST 2021 surveyId - 5 | RTOMyntra | April 14, 2021, 2:02 p.m. | | Running | Success - 2544, No response - 367, Busy - 1286, Failed - 226 | View Details \| Download Report |

- Then drop a mail to Askerbot team informing campaign is stuck
  Email ids - Benjamin Abraham <ben@askerbot.com>, support@askerbot.com, Arun Raj <arun@askerbot.com>

# Helpcenter

# PAIR

### Quick Button not showing on SA

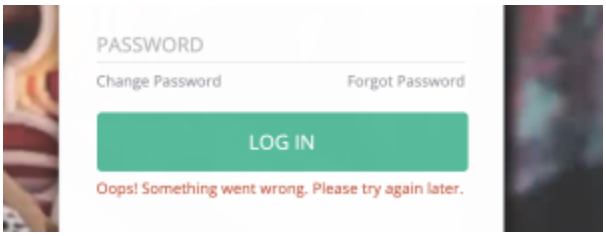
- Check if the issue is at order/packet/item level or at all levels
- Get Item id or packet id or order id or return id
- Raise it to crmoncall@myntra.com

### QB leading to wrong incident and task

- Get Incident id
- Check what QB clicked
- Raise it to crmoncall@myntra.com

# Security

### Login Issues on stage

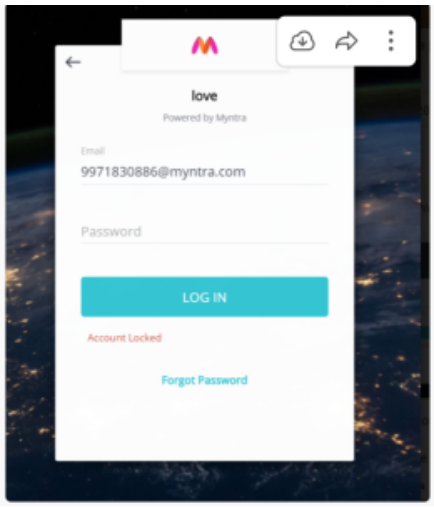


**Solution**: The issue will be related to Airbus. This issue comes mostly on Stage. As all the clients have been moved to accounts.myntra.com. Slack channel (#airbus-client-issues)

For stage(testing ) issue Assign Unknown User (amulya.varshney@myntra.com) Unknown User (saiaditya.mukkamala@myntra.com) Unknown User (abhishyam.chennayipalem@myntra.com) Unknown User (abhishek.jain@myntra.com)

For Production login issues assign Unknown User (abhishyam.chennayipalem@myntra.com) Unknown User (abhishek.jain@myntra.com) Unknown User (godwani.dr@myntra.com)

### User disabled on Idea side



**Solution**: Ask Service desk to enable the user from Security UI Dashboard
POC: Service Desk

**Sharing user list bases on roles, emails and parameters and other data ask requests**

For sharing userList based on **PII** access to **myntra_security** db is prerequisite.

DB access request can be raised from ODIN but PII access has to be separately taken

Once the access is taken, following queries can be run to fetch data from the security database

**Search Users by Role**

```
select A.name as "App Name",RES.name as "Resource Name",TT.type as "Team Type Name",U.email as "Email Address",
R.name as "Role Names",UTM.team_id "Team Id",U.status from user_team_mapping as UTM inner join users as U on  U.
id = UTM.user_id inner join team_type TT on TT.id = UTM.team_type_id inner join roles_users as RU on RU.
user_team_id = UTM.id inner join roles as R on R.id = RU.role_id inner join applications as A on A.idea_app_id
= UTM.application_id inner join resources as RES on RES.id = UTM.resource_id  where R.name in
('role_name1','role_name2')
```

**Search Users by Email**

```
select A.name as "App Name",RES.name as "Resource Name",TT.type as "Team Type Name",U.email as "Email Address",
R.name as "Role Names",UTM.team_id "Team Id",U.status from user_team_mapping as UTM inner join users as U on  U.
id = UTM.user_id inner join team_type TT on TT.id = UTM.team_type_id inner join roles_users as RU on RU.
user_team_id = UTM.id inner join roles as R on R.id = RU.role_id inner join applications as A on A.idea_app_id
= UTM.application_id inner join resources as RES on RES.id = UTM.resource_id  where email in
('email_1','email_2')
```

**Search permissions associated with a role and viceversa. (PII access not needed)**

```
select R.name as 'Role Name',P.name as 'Permission Name' from roles_permissions RP inner join permissions as P
on RP.permission_id = P.id inner join roles R on R.id = RP.role_id where R.name in ('Role_name_1',Role_name_2')
```

**Sharing user assignment details for bulk role removal**

```
select A.name as "App Name",RES.name as "Resource Name",TT.type as "Team Type Name",U.email as "Email Address",
R.name as "Role Names",UTM.team_id "Team Id",U.status from user_team_mapping as UTM inner join users as U on  U.
id = UTM.user_id inner join team_type TT on TT.id = UTM.team_type_id inner join roles_users as RU on RU.
user_team_id = UTM.id inner join roles as R on R.id = RU.role_id inner join applications as A on A.idea_app_id
= UTM.application_id inner join resources as RES on RES.id = UTM.resource_id  where (email,R.name) in (('anurag.
p@myntra.com','LMS_USER'),('prateek.samaiya@myntra.com','SUPER_ADMIN'))
```

by other similar queries can be created based on the requirement from the above sample queries by changing the condition in where clause like sharing user data based on UIDX, login_id

# RN Archive

## Refund status from RN archived data

- From the return id get the pps id from the refunds team or search the returns in SA and get the pps id.
- Search the ***ppsId*** in, **myntra_crm** schema  **imps_log** table  column **idempotentId**.
- Copy the **urnNo** data
- Open **rnarchive** DB
- In the table **CO$IMPS_SP** search the **myntra_URN** filed with the copied **urnNo**
- Share the filtered row **imps_RRN details** with the corresponding **myntra_action** and **myntra_status**
